

CLEFANDIM 360 EC

Clefandim 360EC is a selective, systemic post-emergence herbicide which can be rapidly absorbed by plant leaves and conducted to roots and growing points to inhibit the biosynthesis of plant branched-chain fatty acids. The target weeds then grow slowly and lose competitiveness with seedling tissue early yellowing and followed by the remaining leaves wilting. Finally they will die.

PRODUCT DETAILS

Formula		Registration Number
liquid		95055-6

ACTIVE INGREDIENTS

Active Ingredient	Group number	Formulation
Clethodim	Group 1 HERBICIDE	3.0 lb Clethodim per gallon

STATE:

KEY BENEFITS:

- 1.Green, low-carbon
- 2.Low cost
- 3.Good efficacy
- 4.High stability

KEY CROPS:

Brassica Vegetables
Cotton
Fruiting Vegetables
Grass Forage, Fodder and Hay
Leafy Vegetables
Oilseed
Peanuts
Pome Fruit
Potatoes
Pulse
Soybeans

Stone Fruit

Tuber Vegetables

Key targets:

Annual Grasses

Perennial Grassy Weeds

Roundup Ready Corn
